

VIRTUAL CISO SERVICE (vCISO)

Hands On, full-support
'Security as a Service', specifically
designed for organisations that
require access to experienced
cybersecurity, governance, risk
and compliance professionals.

Why hire a Virtual CISO or vCISO?

The cybersecurity industry is riddled with a shortage of skilled personnel, making it very difficult for organisations to hire effective cybersecurity staff and CISOs. This problem is

amplified for start-ups and small to medium businesses who often also lack the massive budgets required to hire and retain the right kind of people.

Biggest challenges organisations face with Cybersecurity

Skills shortage making it very expensive to hire full-time staff

Dearth of personnel with broad knowledge & multi-sector context

Complex advice by most external consultancies, designed to confuse and increase spend

Inflexible & Rigid Approach to Billing & Services + Complicated Tactics to stretch length of contract

Three Key Benefits of our vCISO Service

1 Experienced security consultants at a fraction of the cost!

Join our vCISO service and gain access to professional cybersecurity advisory and CISO services to suit your budget. More cost effective than hiring your own full time staff or hiring consultants from the BIG 5 consultancies.

2 Professional advice on prioritising technology investments

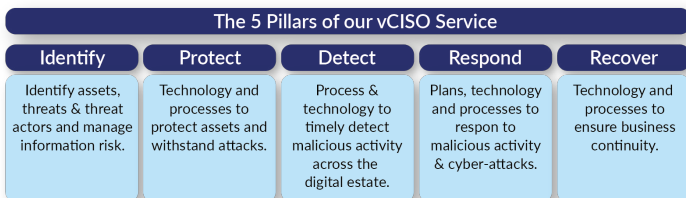

Our aim is to save our clients' money and we achieve this by offering pragmatic and practical advice that often helps reduce overall investments in unnecessary technology stacks.

3 Increased engagement with your Board, Senior Executives & Management

True cyber-resiliency starts from the top. We speak the language of business to engage all executives. Our vCISOs are specialists in engaging and presenting to a range of senior executives, board members and non-technical senior staff.

5 Pillars of our vCISO Services

Our vCISO service is based on five key pillars – Identify, Protect, Detect, Respond & Recover

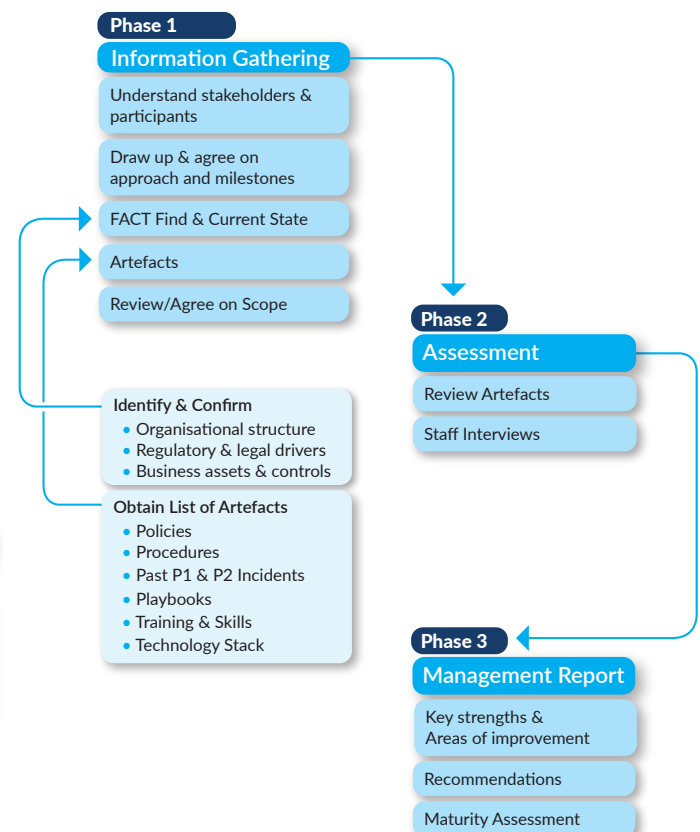

What exactly do you get with our vCISO Service Platform?

The vCISO Process Workflow

As soon as a client signs us on, we conduct a NIST-Based Cyber Health Check & overall Assessment of artefacts before agreeing on the next set of important activities and selecting one or more service domains. The workflow includes the following:

- A review of the artefacts & agreeing on the scope.
- An assessment of the artefacts & staff interviews.
- A management report detailing recommendations and areas of improvement.
